WHAT AREAS ARE SUITABLE FOR IPL & LASER TREATMENTS?

Laser hair removal can remove hair from the face (except around the eyes), back, chest, arms, underarms, bikini-line, and legs. The same areas can be treated for skin rejuvenation.

HOW DO I KNOW IF I AM A GOOD CANDIDATE?

IPL Laser hair removal and skin rejuvenation is available for all skin types, including very light and very dark skin, and most hair colours. Your provider will determine whether you are a good candidate for the procedure based on a variety of factors. This requires a patch test and pre-treatment consultation.

HOW DOES TREATMENT WORK?

A light is used to target and destroy hair follicles responsible for hair growth without harming surrounding tissue. We also use a different setting to target scarring and wrinkles.

HOW LONG DOES THE TREATMENT TAKE?

Laser hair removal treatments vary as it only takes approximately 10 minutes for small areas, and about a half hour for larger areas.

HOW MANY TREATMENTS WILL I NEED?

Several laser hair removal treatments are recommended for optimal results. We can provide a plan tailored just for you. You do not need to let hair grow out between treatment sessions. A minimum of 6 treatments is required.

WHAT DOES THE TREATMENT FEEL LIKE?

Some clients feel nothing at all during the treatment and others may feel a slight snap feeling momentarily.

HOW QUICKLY WILL I RECOVER?

The beauty of this treatment is that you have no downtime from normally daily activities. An after care leaflet will be provided.

DOES THE TREATMENT HAVE ANY SIDE EFFECTS?

Some typical side-effects of laser hair removal / skin rejuvenation include a mild sunburn-like sensation (redness), accompanied by some minor swelling immediately following the treatment. These effects may last a few days.

WHAT HAPPENS BEFORE THE TREATMENT?

You will be required to have a patch test and consultation to ensure you are suitable candidate for the laser treatments.

BEFORE TREATMENT

- Book your consultation and patch test.
- Provide a list of regular medications you are currently taking.
- Do not pluck the hair or remove it by methods like waxing or threading for at least 1 month before the procedure.
- Try to avoid sunbeds and extreme sunlight during treatments.
- The day prior to treatment starting please ensure you shave the area to avoid burning the existing hair.
- Please ensure you report any issues or reactions to the patch prior to your treatment.

AFTER TREATMENT

- Avoid exposure to UV as this can cause skin irritation or burning. This can have an adverse effect on pigment treatments. Always Use an SPF50 or sunblock.
- No Heat treatments for up to 48 hours or until the skin shows no signs of reaction including saunas, sunbeds and steam rooms as this can cause burning or irritation.
- Avoid excess exercise loose clothing or anything that can cause friction in the area for up to 48 hours.
- No swimming due to the chlorine and chance of infection until skin has healed sufficiently.
- Avoid Chemicals and perfumed products on the treated area, such as scented moisturisers, perfumes, fake tan, spray tan etc. as these may irritate healing skin. These products can be used after 48-72 hours when the client is sure the area is not suffering from irritation, however strong chemicals such as perfume directly on the skin is not ideal.
- Exfoliation products or scratching a scabbed area will cause skin damage as the skin is already sensitive. Allow 48-72 hours and check for irritation or redness.
- STOP any form of epilation, waxing , plucking or threading as IPL / Laser needs chromophore in the hair root present.
- Do not use any chemical skin treatments , peels etc. during your course of treatments.
- Do use soothing gels, cold compress and approved skin healing formulas such as aloe products to soothe and cool the area if required at regular intervals.
- Always check for any reactions to treatments and inform the technician immediately if any occur after leaving the salon.
